

Protecting Your Digital Life

Between ransomware, data breaches, cryptojacking, supply chain attacks, and mobile malware, it's never been more important to protect your digital life.

Our security and privacy are constantly in danger of being attacked from many sources. Staying secure and guarding as much of our privacy as possible is a constant challenge. This presentation covers how we can protect our computers (Windows and Mac), tablets, smartphones, and other smart devices.

Join presenter Bob Gostischa as he explains the importance of guarding our online presence. He will also share what he uses to keep his computers and smart devices as well as his connected Internet of Things devices secure.

About the Presenter:

Norbert "Bob" Gostischa, after a successful career in banking, enjoys his retirement as an enthusiastic IT security expert, most notably for [Avast Antivirus](#) s.r.o., the global leader in cybersecurity products.

Avast has been making security software for over 30 years and is currently the most used antivirus software in the world with more than 400 million users worldwide.

Avast prevents 2 billion attacks every month.

In 2016, Prague-based Avast purchased Netherlands-based AVG Technologies and in 2017 bought London-based Piriform (CCleaner, Defraggler, Recuva, Speccy).

The Avast website has a [discussion and help forum](#) where Bob has been helping with security-related and general computer issues since 2004. He has contributed over 38,000 forum interactions.

Bob's presentations are free-of-charge and are not a sales pitch for Avast, although mentioning Avast and its software in meeting announcements is appreciated since they pay the bills. You can learn more about Bob's presentations and passions in his [Blog](#) and [YouTube](#) Channel. Bob is a proud member of the [APCUG](#) Speakers Bureau.
